

Pandemic Preparedness and Response Observatory

The **Pandemic Preparedness and Response Observatory** is a central information hub that brings together publicly available knowledge on how European countries organise their research and innovation (R&I) efforts for pandemic preparedness and response.

How is the information compiled?

Country Profile

- National strategies and policies related to pandemic preparedness and response
- Research infrastructures, clinical trials, and initiatives from biomedical research to One Health and social sciences
- Funding mechanisms and programmes
- Key organisations and stakeholders involved

What comes next?

The Observatory will evolve further within **BE READY NOW**, with new tools such as:

- **BE READY NOW Radar** – tracking emerging trends and needs
- **BE READY NOW Accelerator** – fostering innovation uptake
- **A searchable database** – allowing users to filter and explore data more easily

Available Country Profiles in the Observatory

To ensure accuracy and completeness, the Observatory is **continuously updated and expanded**. Stakeholders are actively invited to provide corrections or new input at:

BEREADY.Observatory@vlaanderen.be

Why is it important?

A lot of valuable pandemic-related work is already happening across Europe – but **information is scattered and often difficult to find**. The observatory:

- Improves transparency
- Facilitates knowledge sharing
- Promotes collaboration instead of duplication
- Supports better and faster decision-making
